

# REGIONAL BROWNFIELD ASSESSMENT GRANT

Brown | Door | Florence | Kewaunee  
Manitowoc | Marinette | Oconto | Sheboygan

**Bay-Lake RPC has been awarded EPA Community-Wide Brownfield Assessment funds to help our region identify, assess, clean-up, and redevelop brownfield sites.**

A brownfield site is property that is contaminated with hazardous, petroleum, or other environmental contamination. This poses a threat to the users of the property and complicates expansion, redevelopment, or reuse of the property. Local government leadership is often needed to bring productive uses back to brownfield sites.

Brownfields are everywhere! We can help you identify brownfields in your community. Brownfields vary in size. They can be as small as a corner lot or hundreds of acres and can exist almost anywhere - from commercial corridors to rural areas. Common brownfield sites include former gas stations, metal plating facilities, laundromats and dry cleaners.
