

CHAPTER 7: TRANSIT SYSTEM PERFORMANCE

PEER SYSTEM ANALYSIS

A useful way to measure the productivity of a transit operation is to compare it to transit operations in other cities. Although few transit operations are directly comparable, there are transit operations serving small urbanized areas with similar densities and other demographic characteristics to the Shoreline Metro service area (Sheboygan) which are useful to analyze for comparative purposes. Five other small urbanized transit operations were selected for use in the comparison. Three of the transit operations are located in Wisconsin and two are located in neighboring Iowa. All of the transit operations are of similar size. The transit operations are located in Wausau, Janesville and Beloit, Wisconsin, and in Dubuque and Waterloo, Iowa. Data for comparison were published in the “agency profiles” section of the National Transit Database (NTD) for 2016 and 2017, published by the Federal Transit Administration (FTA).

Four measures were selected for comparison of these systems. These are cost and productivity measures which are widely accepted in the public transit industry. These measures include: passengers per revenue hour; passengers per revenue mile; cost per revenue hour; and cost per passenger trip.

Please note that this peer system analysis only includes the fixed-route transit component at each transit operation, and typically does not include paratransit services.

Passengers per Revenue Hour

Figure 7.1 shows productivity in terms of passengers per revenue hour. Shoreline Metro, at 13.50 passengers per revenue hour, was the fourth highest of the six transit systems in the comparison in 2016. Utilization of Shoreline Metro increased to 14.06 passengers per revenue hour in 2017, an increase of about 4.1 percent; this compared to a decrease of over 22 percent in Beloit, decreases of 10 percent or less in Dubuque, Waterloo and Wausau, and an increase of 2.4 percent in Janesville from 2016 to 2017. The 2017 passenger per revenue hour statistic for Shoreline Metro was the third highest of the peer systems.

Figure 7.1: Passengers per Revenue Hour

Source: 2016 and 2017 National Transit Database Agency Profiles, Federal Transit Administration; and Bay-Lake Regional Planning Commission, 2019.

Passengers per Revenue Mile

The number of passengers per revenue mile is shown in Figure 7.2. Shoreline Metro, at 0.91 passengers per revenue mile, was the fourth highest of the six transit systems in the comparison in 2016. Utilization of Shoreline Metro increased to 0.97 passengers per revenue mile in 2017, an increase of nearly 6.6 percent; this compared to decreases of between 6 and 15 percent in Beloit, Dubuque, Waterloo and Wausau, and an increase of 2.7 percent in Janesville from 2016 to 2017. The 2017 passenger per revenue mile statistic for Shoreline Metro was also the fourth highest of the peer systems.

Figure 7.2: Passengers per Revenue Mile

Source: 2016 and 2017 National Transit Database Agency Profiles, Federal Transit Administration; and Bay-Lake Regional Planning Commission, 2019.

Cost per Revenue Hour

The cost per revenue hour reflecting vehicle operating costs is shown for the various transit systems in Figure 7.3. These data indicate that Shoreline Metro had the second lowest cost per revenue hour of the six systems in the comparison in both 2016 and 2017. Shoreline Metro saw an increase in its cost per revenue hour of 8.4 percent between 2016 and 2017. Three of the remaining five peer systems also saw increases in their cost per revenue hour between 2016 and 2017 (Janesville, Waterloo and Wausau). Beloit saw its cost per revenue hour decrease by 0.2 percent, while Dubuque saw its cost per revenue hour decrease by about 2.0 percent.

Figure 7.3: Cost per Revenue Hour

Source: 2016 and 2017 National Transit Database Agency Profiles, Federal Transit Administration; and Bay-Lake Regional Planning Commission, 2019.

Cost per Passenger Trip

The cost per unlinked passenger trip is compared in Figure 7.4. Shoreline Metro was the third lowest of the six transit systems in the comparison in both 2016 and 2017. The cost per passenger trip for Shoreline Metro increased to \$5.97 in 2017, an increase of 4.0 percent from 2016. All of the peer transit systems had increases in their cost per passenger trip between 2016 and 2017, ranging from 2.4 percent (Janesville) to 28.6 percent (Beloit).

Figure 7.4: Cost per Passenger Trip

COST ALLOCATION MODEL

Cost information from 2018 was used to develop a three factor cost allocation model of current Shoreline Metro operations. Such a model is useful in estimating the costs of various individual routes, as well as in estimating the cost ramifications of any proposed service alternatives. In order to develop such a model, each estimate of cost is allocated to one of two service variables. The two service variables used to allocate costs are the number of revenue hours and the number of revenue miles. In addition, fixed costs are identified as being constant. This is a valid assumption for the short-term future, although fixed costs could change over the long-term future.

Examples of the cost allocation methodology include: allocating fuel costs to revenue miles; allocating operator wages to revenue hours; and allocating training and liability insurance expenses to fixed costs. Total costs allocated to each variable are then divided by the total route services quantity (i.e.: total revenue hours or total revenue miles in 2018) to determine a cost rate for each variable.

The allocation of cost for the 2018 Shoreline Metro operation is presented in Table 7.1. This cost allocation has been applied to fixed-route services only. Paratransit services provided by the Metro

Connection division of Shoreline Metro have been excluded from the cost allocation methodology in order to focus on the productivity of Shoreline Metro’s fixed-route service. The cost allocation shown in Table 7.1 yields the following cost equation for fixed-route services:

$$\text{Total Cost} = (\$36.48 \times \text{Revenue Hours}) + (\$2.10 \times \text{Revenue Miles}) + \$846,819$$

Table 7.1: Shoreline Metro Cost Allocation Model, 2018

Annual Expenses	Cost Factor			
	Revenue Hours	Revenue Miles	Fixed Cost	
Expenses - Operations				
Salaries and Wages	\$1,024,466	\$1,024,466		
Employer Paid Benefits	\$384,539	\$384,539		
Uniforms	\$12,322	\$12,322		
Total Expenses - Operations	\$1,421,327	\$1,421,327	\$0	\$0
Expenses - Maintenance				
Salaries and Wages	\$321,304	\$321,304		
Employer Paid Benefits	\$149,989	\$149,989		
Tires and Tubes	\$33,258	\$33,258		
Vehicle Maintenance	\$27,272	\$27,272		
Facilities Maintenance	\$29,509	\$29,509		
Fuel, Oils and Lubricants	\$317,903	\$317,903

ROUTE PRODUCTIVITY

Each individual route has been evaluated to determine its productivity in terms of passengers per hour, passengers per mile, and cost per passenger. Individual route productivity is shown in Table 7.2. Table 7.2 and its accompanying narrative measure productivity for each route for all periods of operation for that route in 2018, including Saturdays for all regular routes.

Passengers per Hour – Regular Routes

The route productivity in passengers per hour for regular routes is shown in Figure 7.5. There was significant variation in the number of passengers per hour, ranging from over 5.1 passengers per hour to over 18.7 passengers per hour. Route 10 had the highest productivity using this measure among regular routes, followed by Route 5, Route 7 and Route 3. The route which exhibited the lowest productivity using this measure was Route 40 (a seasonal route catering to tourism). The North and South Shuttles also had a robust passenger per hour ratio, while Route 20 had a lower passenger per hour ratio in comparison to other routes. The passenger per hour ratio for regular routes was calculated for all days of service operation in 2018. It should be noted that weekday productivity would be higher than Saturday productivity for most regular routes.

Figure 7.5: Passengers per Hour: Regular Routes

Source: Shoreline Metro, 2018; and Bay-Lake Regional Planning Commission, 2019.

Table 7.2: Route Productivity

Route	Passengers per Day	Annual Passengers	Trips per Weekday	Trips per Saturday	Trip Hours	Miles per Trip	Passengers per Hour	Passengers per Mile	Cost per Passenger	Annual Cost per Route
3	406	124,786	54.00	20	0.50	6.9	15.75	1.28	\$5.27	\$657,549
5	437	134,310	54.00	20	0.50	7.4	16.95	1.29	\$5.04	\$677,293
7	419	128,684	54.00	20	0.50	8.5	16.24	1.07	\$5.60	\$720,729
10	483	148,298	54.00	20	0.50	8.1	18.72	1.30	\$4.75	\$704,934
20	62	19,156	8.50	5	1.00	21.4	7.37	0.39	\$13.82	\$264,747
40 ¹	53	4,385	20.00	16	0.50	4.6	5.11	0.62	\$14.00	\$61,380
Tripper #101 ²	8	1,396	1.00	0	1.00	24.6	7.33	0.34	\$14.99	\$20,932
Tripper #102 ²	12	2,123	1.00	0	1.00	21.7	11.15	0.58	\$9.21	\$19,555
Tripper #201 ²	16	2,840	1.00	0	2.00	19.3	7.46	0.87	\$9.74	\$27,673
Tripper #202 ²	17	3,100	1.00	0	2.00	15.9	8.14	1.15	\$8.41	\$26,059
North and South Shuttles	100	30,578	14.64	24	0.50	6.5	11.47	0.99	\$7.06	\$215,848
Annual Total Cost										\$3,396,699

¹Route 40 is a seasonal route that (in 2018) began operating the day after Memorial Day and ran through the Saturday before Labor Day. Route 40 serves several attractions in downtown Sheboygan, the Riverfront, the Lakefront and South Pier. Route 3 also serves the South Pier area.

²The tripper routes primarily serve students traveling to and from school. Routes 101 through 102 were morning routes, while Routes 201 through 202 were afternoon routes. All routes were in operation throughout the 2018 portion of the 2017 – 2018 and 2018 – 2019 school years.

Source: Shoreline Metro, 2018; and Bay-Lake Regional Planning Commission, 2019.

Passengers per Hour – School Tripper Routes

The route productivity in passengers per hour for school tripper routes is shown in Figure 7.6. The variation in the number of passengers per hour among school tripper routes ranged from over 7.3 passengers per hour to nearly 11.2 passengers per hour. Tripper 102 had the highest productivity using this measure among school tripper routes, followed by Tripper 202. School tripper routes which exhibited the lowest productivity using this measure included Trippers 101 and 201. All trippers in this analysis operated during all school days in 2018 (178 days).

Figure 7.6: Passengers per Hour: School Tripper Routes

Source: Shoreline Metro, 2018; and Bay-Lake Regional Planning Commission, 2019.

Passengers per Mile – Regular Routes

The route productivity in passengers per mile for regular routes is shown in Figure 7.7. As is evident in Figure 7.7, there was significant variation in the number of passengers per mile, ranging from 0.39 passengers per mile to 1.30 passengers per mile. Route 10 had the highest productivity using this measure among regular routes. Other high productivity routes using this measure (in order of the most productivity) include Routes 5, 3 and 7, and the North and South Shuttles. Route 20 had the lowest productivity using this measure among regular routes, followed by Route 40.

With the exception Route 40 (which is a seasonal route), the passenger per mile ratio for regular routes was calculated for all days of service operation in 2018. It should be noted that weekday productivity would be higher than Saturday productivity for most regular routes.

Figure 7.7: Passengers per Mile: Regular Routes

Source: Shoreline Metro, 2018; and Bay-Lake Regional Planning Commission, 2019.

Passengers per Mile – School Tripper Routes

The route productivity in passengers per mile for school tripper routes is shown in Figure 7.8. The variation in the number of passengers per mile among trippers ranged from 0.34 passengers per mile to 1.15 passengers per mile. Tripper 202 had the highest productivity using this measure among school tripper routes. Another high productivity school tripper route was Tripper 201. It should be noted that both of these high productivity routes run in the afternoon. The school tripper route which exhibited the lowest productivity using this measure was Tripper 101, followed by Tripper 102. All trippers operated during all school days in 2018 (178 days).

Figure 7.8: Passengers per Mile: School Tripper Routes

Source: Shoreline Metro, 2018; and Bay-Lake Regional Planning Commission, 2019.

Cost per Passenger – Regular Routes

The route productivity in terms of cost per passenger for regular routes is shown in Figure 7.9. There was significant variation in the cost per passenger among the regular routes, ranging from \$4.75 to \$14.00. A majority of the regular routes were operating in the range of a \$4.75 to \$5.60 cost per passenger trip. At \$4.75 per passenger, Route 10 had the highest productivity using this measure among regular routes, followed by Route 5 (\$5.04), Route 3 (\$5.27), and Route 7 (\$5.60). Regular routes which exhibited lowest productivity using this measure included Route 40 (\$14.00), followed by Route 20 (\$13.82). The North and South Shuttles had a cost per passenger of \$7.06.

Again, with the exception of Route 40 (which is a seasonal route), the cost per passenger ratio for regular routes was calculated for all days of service operation in 2018. It should be noted that weekday productivity would be higher than Saturday productivity for most regular routes.

Figure 7.9: Cost per Passenger: Regular Routes

Source: Shoreline Metro, 2018; and Bay-Lake Regional Planning Commission, 2019.

Cost per Passenger – School Tripper Routes

The route productivity in terms of cost per passenger for school tripper routes is shown in Figure 7.10. Variation in the cost per passenger ranged from \$8.41 to \$14.99. At \$8.41 per passenger, Tripper 202 had the highest productivity using this measure among school tripper routes. At the other end of the spectrum, at \$14.99 per passenger, Tripper 101 had the lowest productivity using this measure among school tripper routes. In between these two extremes were Tripper 102 (\$9.21 per passenger) and Tripper 201 (\$9.74 per passenger). Again, all tripper routes operated during all school days in 2018 (178 days).

Figure 7.10: Cost per Passenger: School Tripper Routes

Source: Shoreline Metro, 2018; and Bay-Lake Regional Planning Commission, 2019.

OVERALL SYSTEM PERFORMANCE BY DAY OF THE WEEK

Weekdays

There were a total of 566,208 weekday trips made in 2018, or an average of over 2,220 trips per weekday of service. On an “average” weekday in 2018, there were 1.15 passengers per revenue mile, 15.88 passengers per revenue hour, and 8.96 passengers per route run. “Average” weekday statistics are higher than “average” Saturday statistics to a great extent because of school tripper route activity and large numbers of passengers traveling to and from work or other activities that occur primarily on weekdays.

Saturdays

There were a total of 33,506 Saturday trips made in 2018, or an average of over 644 trips per Saturday of service. On an “average” Saturday in 2018, there were 0.75 passengers per revenue mile, 10.18 passengers per revenue hour, and 5.69 passengers per route run.
